Introduction to CDP-ACS

In order to allocate sector-specific questions to companies, CDP has developed a new Activity Classification System. This is a framework used to categorize companies by the most relevant sectors. It focuses on the diverse activities from which companies derive revenue and associates these with the impacts to their business from climate change, water security and deforestation.

As a result, this new approach ensures a better understanding of company actions according to their environmental risk, opportunity and impact and is essential for better comparability of data.

CDP-ACS is a three-tiered system comprised of (from bottom-up) Activity, Activity Group and Industry. The full list of CDP-ACS can be found below with the corresponding sector-specific questionnaire (if applicable).
